Employment Skip Tracing has contracted with Forward Slash Technology to perform Quarterly Vulnerability Scans, Vulnerability Risk Assessment and Mitigation using Nexpose by Rapid7. Forward Slash Technology concluded the last Quarterly Scan, 6/15/2016.

Forward Slash Technology also performs annual Information Technology policy reviews for Employment Skip Tracing in accordance with CIS (Center for Internet Security) Critical Security Controls Version 6.0 recommendations. This entails reviewing Employment Skip Tracing's Information Technology Polices to ensure they are up to date and that procedures in the policies are being followed and documented. Forward Slash Technology performed the last Annual Review in December of 2015.
